## **Melting Point Knit | Product Spec Sheet**

Melting Point Knit is a stretch ceiling fabric with great light diffusion for trade shows, convention centers, exhibits, and museums. The melting lines are located every 12" along the length of the fabric allowing sprinkler water and smoke to come through.

In the event of a fire, the heat from the smoke at 82°C (Celsius) | 180°F (Fahrenheit) will dissolve the melt lines, causing the fabric to separate, allowing the water from the sprinklers to pass through. At 130°C (Celsius) | 266°F (Fahrenheit) the fabric will melt.

Material: 100% Trevira Polyester | 100"W

Fire Rating: NFPA 701 | Title 19 (CA1237)

Fire Spec: IFR

Weight Ln: 10oz.

Weight Sq: 4.75oz.
